 Open-minded, studious self-starter with a love for all things Front End. My passion for development stems from a penchant for learning; aptitude for problem solving and a need to create.

Having been travelling and taken time to explore the world; a life long goal of mine, I am excited, prepared and fully committed to achieving my next goal; to make my passion my career.

PROJECTS

REACT GUARDIAN NEWS APP

A fully responsive react CRUD application using The Guardian News & Open Weather Map API with Firebase for Database, Auth and Hosting.

I worked with The Guardian's style guide to retain brand consistency. MaterializeUI was used for the icons.

This app features:

- Various React hooks such as useEffect, useHistory and useLocation to make API calls and define routes.
- Multiple API calls to fetch News and Weather data.
- State stored and persisted using Redux and local storage.
- User authentication to allow for article comment creation, deletion and editing.

<https://github.com/RuariDouglas/React-Guardian-App>

SHIFT TRACKER

A fully responsive back-end focussed CRUD project built with MongoDB, Express & Node. The application requires you to enter your work shift details, in turn through Javascript; exact hours are calculated and stored in the database and a total hours figure is displayed for each month.

This app features:

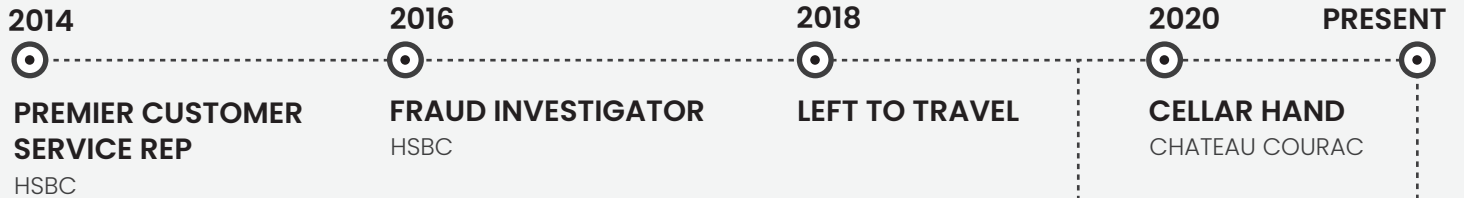

- Form validation through Javascript.
- CRUD routing with Express router.
- User authentication using passport local mongoose and MongoDB.

Up until this point, my partner calculated all her hours with pen and paper so this was built to make her life easier.

EMPLOYMENT HISTORY

For the final 3 months of my travels I began studying web development, spending every spare minute I had. I have continued this upon moving to France in April 2020 with my partner whilst working at Chateau Courac winery.

LEAD DESIGNER

BIG DECISION
2010 - 2013

Initially hired as a web designer, I was:

- Involved from the preliminary stages of planning, creating wireframes and design proposals.
- Communicating regularly with clients to ensure expectations and deadlines were met.
- Responsible for presenting and explaining all proposals.

Seeing that all static site designs were outsourced for development, I learned HTML and CSS and took on the role of designer and developer.

EDUCATION

Some of the courses I've completed:

- Stefan Mischook's Web Fundamentals
- Colt Steele's Web Developer Bootcamp
- Dev Ed's React Course
- Net Ninja's: Firebase

Scottish Higher Level:

- Graphic Communication: A
- Music: A
- History: B
- English: C
